

# Interactive Wireless Flashing LED Warning Signs

Activated by Kinetic Safety ErgoGate

from **ERGOMAT**

**Avoid dangerous collisions between pedestrians and vehicles on all busy facility floors.**

Sign is dormant when safety gate is closed.

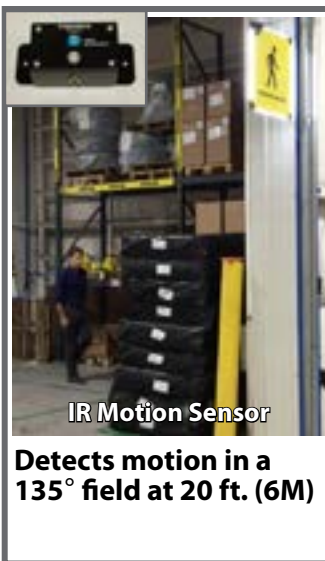

Flashing sign activated as soon as safety gate is opened.

Warning sign informs vehicle operator of pedestrian presence.

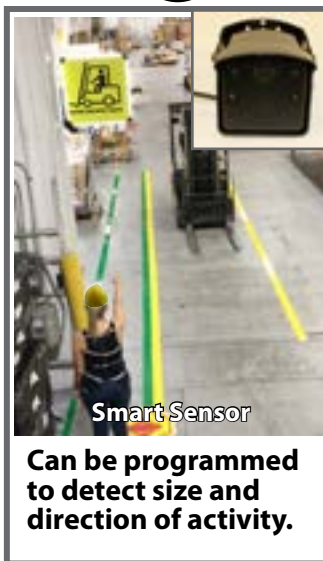

The revolutionary Ergomat ErgoGate can be located anywhere in your facility. Installation flexibility comes from the fact that **the kinetic switch on the gate requires no electrical power**, eliminating thousands of dollars in installation expenses, making it unnecessary to compromise your ideal safety gate locations. One gate signal can activate individual or multiple signs, and multiple gates can be programmed to activate a single sign, protecting pedestrians arriving at a busy intersection from different directions.

## Other Detection Options

IR Motion Sensor

Detects motion in a 135° field at 20 ft. (6M)

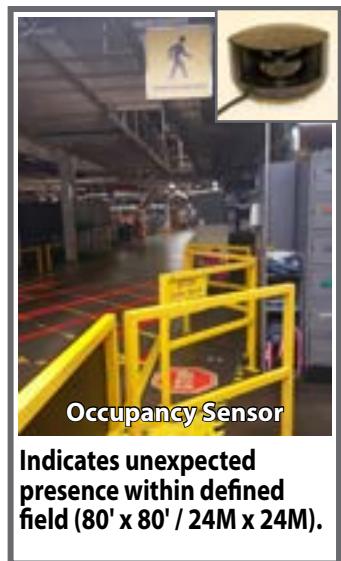

Smart Sensor

Can be programmed to detect size and direction of activity.

Laser Sensor

Detects emergence from confined spaces.

Occupancy Sensor

Indicates unexpected presence within defined field (80' x 80' / 24M x 24M).

# Interactive Safety ErgoGate Specifications

## Safety ErgoGate Specifications

Post Height	42" (105cm)
Post Dimensions	2" x 2" (5cm x 5cm)
Gate Height	38.5" (100cm) on Center (Customizable)
Gate length	37" (94cm) (Cusomizable between 24" (60cm) and 47" (119))
Overall width	42" (105cm)

## Kinetic Switch

Cycles	Over 1,000,000
Signal coverage	1,000 Feet

## Standard Sign Package:

- LED bordered 24" x 24" (60cm x 60cm) sign
- Double sided Caution Pedestrian graphic (Multiple stock and custom graphics available)
- 6A power supply
- 10' (3M) power supply extension (Longer extension optional)
- Sign and gate paired at factory for easy Plug & Play installation
- Wireless receiver / transmitter

Safety ErgoGate with Standard Sign Package Part # - **ERGO-KSG-COMBO24-D (North America)**  
**ERGO-KSG-COMBO60-D (Europe)**
